

OCR--VLM operating modes and source-disjoint robustness

A. Set B precision--coverage choices

B. Rule-frozen source exclusions

Set B workload per drawing (median [IQR]): union candidates 4 [2, 5], false candidates 1 [0, 2]; intersection candidates 1 [0, 2].

All rules are answer-independent. The 83-source checks retain 18 mutual overlaps; the two 65-source subsets share no sources with Set B or each other.
